Type 44-1 B Pressure Reducing Valve · Type 44-6 B Excess Pressure Valve

Series 44 Self-operated Pressure Regulators · ANSI version

Application

Set points from **3 to 290 psi/0.2 to 20 bar** with valves $\frac{1}{2}$ NPT to 1 NPT as well as NPS $\frac{1}{2}$ and 1 · Pressure rating **Class 150 and 300** · Suitable for nitrogen and steam up to **390 °F/200 °C**, liquids and air up to **300 °F/150 °C**, other gases up to **175 °F/80 °C**

Type 44-1 B Pressure Reducing Valve · The valve **closes** when the **downstream** pressure rises

Type 44-6 B Excess Pressure Valve · The valve **opens** when the **upstream** pressure rises

The regulators consist of a valve and an integrated actuator with an operating bellows and a set point adjuster.

Special features

- Low-maintenance proportional regulators requiring no auxiliary energy
- Wide set point range and convenient set point adjustment
- Spring-loaded, single-seated valve without pressure balancing or plug balanced by a bellows
- Stainless steel operating bellows as operating element
- Compact design with particularly low overall height
- Any mounting position possible
- Valve body made of red brass, spheroidal graphite iron or stainless steel
- Meets fugitive emissions requirements based on VDI 2440

Principle of operation (see Fig. 3)

The medium flows through the valve in the direction indicated by the arrow. The position of the plug determines the flow rate across the area released between plug (2) and valve seat (3).

The Type 44-1 B Pressure Reducing Valve is open when relieved of pressure. The valve closes when the downstream pressure (p_2) rises above the adjusted set point.

The Type 44-6 B Excess Pressure Valve is closed when it is relieved of pressure. The valve opens when the upstream pressure rises above the adjusted set point.

In both versions, the pressure to be kept constant is transmitted through a borehole (4) in the valve body (1) to the operating bellows (5) where it is converted into a positioning force. It moves the valve plug depending on the spring rate of the set point springs (7) and the setting of the set point adjusting screw (9).
