

T 3008 EN

Type 42-20 and Type 42-25 Differential Pressure Regulators

Series 42 Self-operated Pressure Regulators (opening) · ANSI version

Application

Differential pressure regulator for extended heating systems and industrial applications

Differential pressure set points (Δp) from **0.75 to 145 psi**/0.05 to 10 bar · Valves **NPS ½ to 10**¹⁾/DN 15 to 250

Pressure rating **Class 125 to 300** · Suitable for liquids and vapors²⁾ from **40 to 660 °F**/5 to 350 °C, for air and non-flammable gases up to **175 °F**/80 °C

The valve **opens** when the differential pressure **rises**.

The differential pressure to be controlled is transmitted to the spring-loaded operating diaphragm in the actuator and converted into a positioning force to move the valve plug. The regulators control the differential pressure according to the adjusted set point.

Special features

- **Type 42-20:** Fixed set point
- **Type 42-25:** Set point adjustable in wide range
- Low-noise, medium-controlled proportional regulator requiring little maintenance
- Single-seated valve with a plug balanced by a stainless steel bellows or a diaphragm (NPS 2½ to 10/DN 65 to 250)
- Suitable for circuit water, water/glycol mixtures, steam and air as well as other liquids, gases and vapors, provided these do not affect the characteristics of the operating diaphragm
- Valve body optionally made of cast iron A126B, cast steel A216 WCC or cast stainless steel A351 CF8M

Versions

Differential pressure regulators for installation in a bypass pipe or short-circuit pipe (see Fig. 4) · Flanged connections

- **Type 42-20** (Fig. 1) · Type 2422 Valve · Balanced by a bellows NPS ½ to 4/DN 15 to 100 · Balanced by a diaphragm NPS 2½ to 4/DN 65 to 100 · Type 2420 Actuator · Fixed set point, adjusted to $\Delta p = 3, 4, 6$ or $7 \text{ psi}/0.2, 0.3, 0.4$ or 0.5 bar
- **Type 42-25** · Type 2422 Valve · Balanced by a bellows NPS ½ to 10/DN 15 to 250 · Balanced by a diaphragm NPS 2½ to 10/DN 65 to 250 · Type 2425 Actuator · Set point adjustable within the range between 0.75 to $145 \text{ psi}/0.05$ to 10 bar

¹⁾ Valves larger than NPS 10/DN 250 on request

²⁾ Version balanced by a bellows only

Fig. 1: Type 42-20 Differential Pressure Regulator

Fig. 2: Type 42-25 Differential Pressure Regulator

Accessories

Required accessories, such as compression-type fittings, needle valves, compensation chambers and control lines, are listed in Data Sheet ▶ T 3095.

Special versions

- Actuator with two diaphragms (Type 42-25)
- Actuator with FKM diaphragm, e.g. for mineral oils
- Special C_v/K_{vs} (reduced)
- Valve made of stainless steel (at least 1.4301)
- Valves larger than NPS 10/DN 250 on request
- Version for temperatures above $430 \text{ °F}/220 \text{ °C}$
- Check valve for deionized water ▶ T 3010
- Version free of non-ferrous metal on request

- Version for small flow rates · Valve with micro trim with C_v 0.0012 to 0.05/ K_{vs} 0.001 to 0.04 or C_v 0.12, 0.5 and $1.2/K_{vs}$ 0.1, 0.4 and 1 without pressure balancing

Principle of operation (see Fig. 3)

The medium flows through the valve in the direction indicated by the arrow. The position of the valve plug (3) determines the differential pressure over the cross-sectional area released between the plug (3) and seat (2).

The Type 2422 Valve is balanced. The forces acting on the valve plug created by the upstream and downstream pressures are balanced by a balancing bellows (5) or balancing diaphragm (5.1).

In valves balanced by a bellows, the upstream pressure p_1 acts on the outside of the metal bellows (5), while the downstream pressure p_2 acts on the inside of the bellows. In a valve balanced by a diaphragm, the downstream pressure p_2 acts on the inside and the upstream pressure p_1 on the outside of

the balancing diaphragm (5.1). In both cases, the forces created by the upstream and downstream pressures acting on the valve plug are balanced out.

The differential pressure to be controlled is transferred to the operating diaphragm (13) where it is transformed into a positioning force. This force is used to move the plug (3) according to the force of the set point springs. The valve begins to open as soon as the differential pressure exceeds the set point.

In **Type 42-25**, the set point can be adjusted at the set point adjuster (17).

In **Type 42-20**, the set point springs (16) in the actuator determines the set point.

All versions have control lines to transfer the high pressure (+) and low pressure (-) to the actuator.

We offer a special version of Type 42-25 with an actuator with two diaphragms.

Fig. 3: Functional diagram

Type 42-25 Differential Pressure Regulator with two diaphragms

SAMSON offers a special version of Type 42-25 with an actuator with two diaphragms (see Fig. 5). The actuator with two diaphragms provides increased functional reliability.

An actuator with two diaphragms is always required when an FKM diaphragm is to be used. It is especially suitable for applications with thin oils (e.g. heat transfer oil).

The two diaphragms separate both diaphragm chambers connected to the high-pressure and low-pressure connections.

They generate a positioning force from the differential pressure. The two diaphragms separate both diaphragm chambers connected to the high-pressure and low-pressure connections. They generate a positioning force from the differential pressure. A mechanical diaphragm rupture indicator (22) is located between the two diaphragms, which responds at approx. 22 psi/1.5 bar. In the event of a diaphragm rupture, the pressure in the space between the two operating diaphragm starts to increase. This causes the pin in the diaphragm rupture indicator to be pushed outwards and a red ring appears, indicating the diaphragm rupture. The intact operating diaphragm takes on the control task of the ruptured diaphragm.

A pressure switch can be optionally mounted to the actuator to trigger an alarm.

If a diaphragm rupture is indicated, we recommend replacing both diaphragms.

Installing the valve and mounting the actuator

Valve, actuator and control lines (accessories) are delivered unattached.

A coupling nut is used to attach the actuator to the valve. Preferably mount the actuator after the valve is installed.

The following points must be observed:

- Install the valve in horizontal pipelines.
- The direction of flow must match the direction indicated by the arrow on the body.
- Install a strainer (e.g. SAMSON Type 2 NI) upstream of the valve.

Fig. 5: Actuator with two diaphragms for Type 42-25 (special version)

Permissible mounting positions

- Actuator suspended: standard installation, all versions, above 175 °F/80 °C and for applications with steam
- Actuator sideways: versions balanced by a bellows with fixed plug guide
- Actuator upright (actuator on top of the valve): all versions NPS ½ to 3/DN 15 to 80 and max. 175 °F/80 °C

Refer to ► EB 3007 for details.

Application
