T 8039 EN

Series 240 · Type 3351 Pneumatic On/off Valve

Application

Shut-off valve with tight shut-off for liquids, gases and vapors according to DIN or ANSI standards

Valve size DN 15 to 100 · NPS ½ to 4
Pressure rating PN 16 to 40 · Class 125, 150 and 300
Medium temp. -10 to +220 °C · 14 to 428 °F

Special features

The Type 3351 Pneumatic Control Valve consists of an on/off valve and a pneumatic actuator.

Valve body made of:

- Cast iron
- Spheroidal graphite iron
- Cast steel
- Cast stainless steel

Special features:

- Soft-seated valve plug
- Leakage class VI according to IEC 60534-4 or class VI according to ANSI/FCI 70-2
- Direct attachment of solenoid valves and pneumatic lock-up valve without hook-up through the use of a NAMUR adapter plate
- See Data Sheet ▶ T 8350 for details on the mounted accessories
- Suitable mounting kits ▶ EB 8039 (section on accessories)

Versions

Standard version for pressure rating PN 16 to 40 (Class 125, 150 and 300), fail-close or fail-open

- **Type 3351** (Fig. 1) · On/off valve with self-adjusting PTFE V-ring packing · Valve size DN 15 to 100 (NPS ½ to 4) · Medium temperatures from -10 to +220 °C (14 to 428 °F)

Further versions:

- Additional manual override · DN 15 to 80 (NPS ½ to 3)
- Higher ambient temperatures
- Version without PTFE for the tobacco industry
- Adjustable packing
- Packings with special materials

Fig. 1: Type 3351 Pneumatic On/off Valve

Principle of operation

Depending on the type of valve seat and the arrangement of the valve plug, the valve has two different fail-safe actions which are used when the pressure acting on the diaphragm is reduced or when the control signal fails:

- **Fail-close action:** the valve is closed upon supply air failure.
- **Fail-open action:** the valve is opened upon supply air failure.

Direction of flow

The direction of the medium flow in the valve depends on the process medium and the selected fail-safe action.

For fail-close valves which are used to control gases and vapors, the medium must flow in the flow-to-close direction (A → B). Except for the DN 100 version: the medium must flow in the flow-to-open direction (B → A).

For control applications with liquids, the medium must flow in the flow-to-open direction (B → A).

In fail-open valves, all media must flow in the flow-to-open direction (A → B). For versions with the optional manual override, a fail-close valve can be opened and a fail-open valve can be closed in the event of supply air failure.
