Type 3770 Ex d/Ex i Field Barrier

II 2G Ex d [ia] IIC T6 Gb

Application

Field barrier with flameproof enclosure serving as an interface between intrinsically safe and non-intrinsically safe circuits in hazardous areas.

The field barrier is suitable for operating positioners, smart positioners with HART® communication, i/p converters, solenoid valves or limit switches.

Devices with HART® communication need an adaptation, which is available e.g. with Type 3730-3 and Type 3730-6 Positioners.

Upstream connection and direct attachment to intrinsically safe field devices enable the intrinsically safe circuits of these devices to be connected with the circuits of upstream input and output units that are not intrinsically safe. In this way, the advantages of intrinsic safety, such as commissioning and operation when connected to a voltage source, remain in effect within the hazardous area.

The connecting cable of the non-intrinsically safe circuit is introduced into the enclosure of the field barrier either over a conduit system or design-certified metal cable entry.

The field barrier transmits the analog reference variable to i/p converters and positioners. The use of HART® protocol is also possible.

The field barriers must be connected to the equipotential bonding system. For this purpose, a version with minus-sided equipotential bonding (non-floating) and a floating version are available. The version is selected to match the earth of the analog output of the controller or control system.

An M20x1.5 adapter allows for a direct connection through the cable entry of the field devices.

Fig. 1: Type 3770 Field Barrier, attached to positioner

Principle of operation

Channel 1 of the field barrier is especially designed for transmitting analog signals in the range of 4 to 20 mA, but it also transmits the HART® protocol.

Channels 2 and 3 are intended for controlling limit switches according to IEC 60947-5-6 or Ex i solenoid valves (e.g. Type 3767 Positioner with a solenoid valve coil for 6 V).

Switching amplifier

When interconnecting the field barrier with multi-channel switching amplifiers, it is important to make sure that the different channels in the switching amplifier do not operate on a common potential. Otherwise unwanted interaction of the limit contacts could occur.

Equipotential bonding system

The individual current circuits of the Type 3770 Ex d/Ex i Field Barrier are electrically connected with internal and external equipotential bonding terminals.

For safety reasons, the intrinsically safe circuits must be connected to the equipotential bonding system.

The connection between the equipotential bonding terminal and the equipotential bonding system must be as short as possible.

Channels 2 and 3 are set up to be barriers for positive potential.

Channel 1 can be set up to be floating (Fig. 3) or for positive potential (Fig. 4).

Mounting

The field barrier has a connecting adapter with an M20x1.5 male thread, allowing direct mounting on an intrinsically safe field device, such as a Type 3730-3 Positioner.

If the wiring method is used, the cable ends must be connected to an Ex i junction box.

The input is fitted with a ½ NPS female thread or an M20x1.5 female thread connection.

Table 1: Technical data

Connection		Channel 1: Ch 1 +/-	Channel 2 and 3: Ch 2 +/- and Ch 3 +/-
Operating values		0/4 to 20 mA or U_N to 15 V DC or limit switches acc. to IEC 60947-5-6 not suitable for transmitter supply	0/4 to 20 mA or U_N to 10 V DC
Input		$U_m = 250$ V	
Fuse rating		$I_N = 80$ mA (slow-acting)	
Output circuit		Ex ia IIC	
Maximum values according to EC type examination certificate			
Max. output voltage	U_0	≤ 17.2 V	≤ 12.6 V
Max. output current	I_0	≤ 110 mA	≤ 49 mA
Max. power	P_0	≤ 473 mW	≤ 154 mW
Max. perm. capacitance	C_0	360 nF/IIC · 2.1 μ F/IIB	1.15 μ F/IIC · 7.4 μ F/IIB
Max. perm. inductance i	L_0	3 mH/IIC · 12 mH/IIB	15 mH/IIC · 56 mH/IIB
Series resistance	R_{Lmax}	190 Ω	285 Ω
Load impedance		3.8 V/20 mA	5.7 V/20 mA
Perm. ambient temperature		-45 °C $\leq t_a \leq +60$ °C T6	
Degree of protection		IP 65 according to DIN EN 60529	
Enclosure material		Die-cast aluminum, painted or stainless steel (AISI 316)	

Table 2: Summary of explosion protection approvals

Type	Certification			Type of protection/comments
