

MANUFACTURER'S DECLARATION

Translation of original document

EU directives 2011/65/EU (RoHS) and 2012/19/EU (WEEE)

The new RoHS 2 Directive 2011/65/EU and the Commission Delegated Directive (EU) 2015/863 fully replace the previous RoHS 1 Directive 2002/95/EC. Many products manufactured by SAMSON AKTIENGESELLSCHAFT (hereafter referred to as "SAMSON") fall within the scope of the directives when they contain electrical components.

The part of our product portfolio covered by the directives' scope is in most cases categorized as industrial monitoring and control instruments (part of equipment category 9). Directive 2012/19/EU defines it in Annex I and II.

As a result, the substances banned according to RoHS 2, Annex II to IV apply to our affected products as of 22 July 2017. An addition of phthalate plasticizers from the Commission Delegated Directive (EU) 2015/863 applies as of 22 July 2021.

The exceptions and transitional periods (also for category 9) that exist for specific banned substances allow manufacturers to plan and substitute materials affected within the legal deadline.

To ensure conformity with RoHS, SAMSON has implemented the harmonized standard EN 50581:2012 and as the amended version (EN IEC 63000).

The documents for CE marking, which include the declaration on RoHS, are available on our website (Downloads) for each electric/electronic device (see Certificates/EU declaration of conformity).

Information of the safe disposal of waste electrical and electronic equipment can be found on our website using the search term "safe disposal". The WEEE registration number for SAMSON AKTIENGESELLSCHAFT is: DE 62194439

In view of our responsibility towards the environment, SAMSON strives at implementing the banned material regulations stipulated in the rules and regulations mentioned above as early as possible. As a result, SAMSON has put extensive work into identifying substances that are harmful to the environment and into substituting them.

Any customer requirements that go beyond the mentioned RoHS 2 directive can be implemented on a case-by-case basis. In this case, the amount of work and deadlines must be determined with due diligence.
