Networked Valves and Digital Solutions at 2018 Valve World Expo

SAMSON will be represented in Düsseldorf, Germany on booth D53 in hall 3 from 27 to 29 November. Exhibits will include products and system solutions by SAMSON including the CERA SYSTEM, LEUSCH, PFEIFFER, RINGO, SED, STARLINE and VETEC product lines. The focus will be on smart, networked valves and digital solutions, such as the new predictive monitoring and diagnostics system, SAM GUARD.

By analyzing historical data, SAM GUARD detects failures days to weeks in advance and provides a few truly actionable alerts. SAM GUARD monitors the entire plant, requires no additional hardware, can be installed on on-site servers and has read-only access to the process control system.

Over the past 111 years, SAMSON has been driving forward new developments and introduced innovations to the market as a trendsetter. The evolution of valves from analog components to smart control valves has top priority. For SAMSON, the digital transformation in process automation is a huge entrepreneurial challenge and business opportunity. And customers will benefit from it by increasing the efficiency of production plants.
